

BackLog with Epic and User Stories

The screenshot shows the Jira interface for a project named "Scenario 14". The left sidebar contains navigation options like "For you", "Recent", "Starred", "Apps", "Plans", "Spaces", and "Recent". The main content area displays a "Backlog" view with a table of work items. The table has columns for "Work", "Status", "Assignee", and "October". The work items are organized into sprints: "S1-1 Employee Wellness & Stress Tracking", "S1-2 Confidential Counseling Booking", and "S1-3 Therapist Appointment & Session Manage...". Each sprint contains several user stories with their respective statuses (e.g., "In Progress", "To Do", "Done") and assignees (e.g., "Unassign...").

Story point assignments

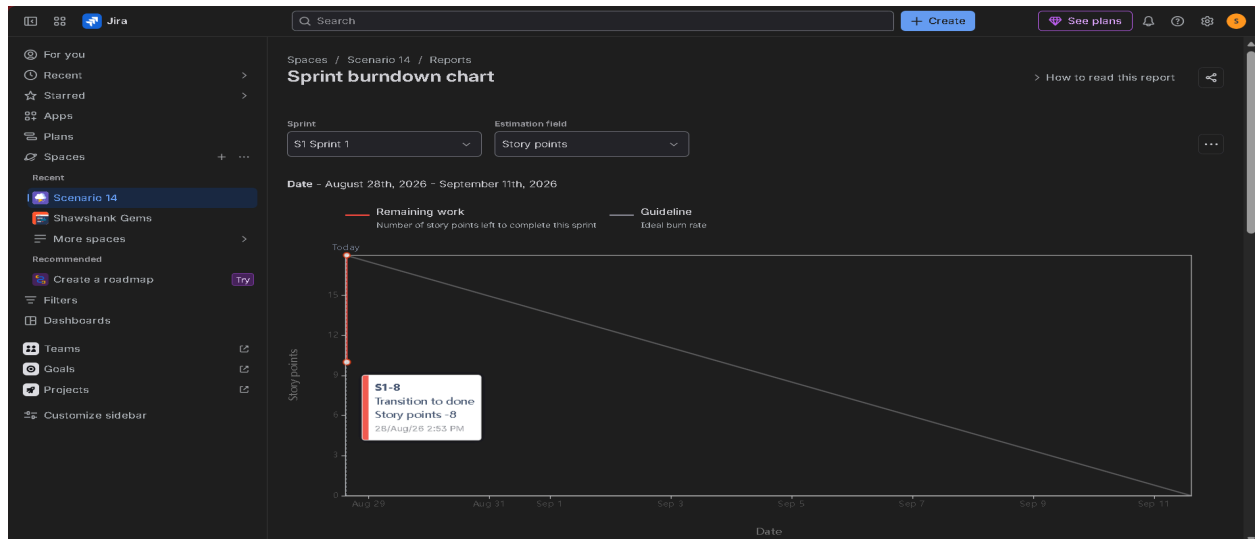

The screenshot shows the Jira interface for a project named "Scenario 14", specifically the "Backlog" view. The left sidebar contains navigation options like "For you", "Recent", "Starred", "Apps", "Plans", "Spaces", and "Recent". The main content area displays a "Backlog" view with a table of work items. The table has columns for "Work", "Status", "Assignee", and "Story Points". The work items are organized into sprints: "S1 Sprint 1 28 Aug - 11 Sep (3 work items)" and "S1 Sprint 2 Add dates (4 work items)". Each sprint contains several user stories with their respective statuses (e.g., "In Progress", "To Do", "Done") and assignees (e.g., "Employee...", "Confident...", "Therapist...").

Work	Status	Assignee	Story Points
S1 Sprint 1 28 Aug - 11 Sep (3 work items)			
S1-6 As a Corporate Employee, I want to complete a stres...	In Progress	Employee...	5
S1-7 As a Corporate Employee, I want the system to gener...	To Do	Confident...	5

S1-12 As a Licensed Therapist, I want to record session n...	To Do	Therapist...	3
S1-5 As a Corporate Employee, I want to view my wellnes...	To Do	Employee...	3

Sprint board (Active Sprint view) for both sprints

Burndown Chart for both sprints

1. Did your estimations reflect the actual effort?

Largely yes — the higher-complexity stories (Book Confidential Counseling Session at 8 points) involved more sub-conditions (availability check, pseudo-ID lookup, alternate flow for taken slots) than the simpler ones (View Personal Wellness Indicators at 3 points), so the relative sizing held up. If any story took noticeably longer or shorter than its points suggested during the simulation, note that specific story here.

2. Was your backlog well-prioritized?

Yes — all the stories tied to confidentiality and core booking (FR-001, FR-003, NFR-001) were marked High priority since the platform's entire value proposition depends on anonymity and reliable scheduling. The lower-stakes convenience feature (viewing wellness history) was Medium, since the platform still functions without it.

3. How did your simulated sprint align with your plan?

Sprint 1 focused on the critical path (assessment → anonymization → booking) and Sprint 2 filled in the supporting therapist-facing and secondary features.

4. What insights did the burndown chart give about your team's capacity?

the remaining-work line tracked close to the guideline, suggesting the 18-point Sprint 1 was a realistic size
